

A BLOCKCHAIN BASED CRYPTOCURRENCY

WHITE PAPER

INTRODUCTION

PUNO Coin is a next-gen cryptocurrency service platform that harnesses the power of blockchain technology to provide privacy, scalability, and security for financial transactions. Founded in 2021, we are a trustworthy partner that drives operational agility and opens new financial and revenue streams by automating our client's crypto portfolio. With the right use of numerous revolutionary technologies, we allow our customers to buy and sell cryptos with a clean, simple, and secure interface.

LAUNCH IN CRYPTOCURRENCY

Harnessing the power of blockchain technology, PUNO enables customers to buy and sell cryptocurrency in a highly secure environment. In the future, it will be bringing exciting fintech initiatives across various sectors and industry channels, making it easier for customers to invest, spend, save, earn with an array of innovative trading and investment tools.

PUNO WALLET

With our high-end and secure PUNO wallet, we aim to drive mass adoption of blockchain-powered businesses across various industries. It enables the real-time transfer of different cryptocurrencies, that too at a minimal fee. Our wallet works similar to the digital wallets that are used these days, where cryptocurrencies are used instead of money. By enabling a user to exchange, buy and sell a variety of tokens, it lets them enjoy instant transactions, better pricing than competitors, and immediate interest accrual.

PUNO TRADING PLATFORM

With a variety of user-friendly features, PUNO trading platform is a one-stop destination for understanding and analyzing the crypto market and investing in it. By offering speed, precision, and high liquidity, it enables users to trade, hold and exchange a variety of crypto coins. With advanced security features and mandatory KYC, it provides a highly secure trading platform to individuals and businesses.

PUNO BLOCKCHAIN

With a team of in-house experts and enterprise partners, PUNO is at the forefront of shaping blockchain ecosystems. By storing real-time data across a network of databases, PUNO blockchain enables smooth, secure, and end-to-end encrypted transactions without the need for a bank or regulatory authority. In this way, the users can buy, sell, exchange, and hold a variety of cryptocurrencies, without revealing their identity. By eliminating the need for a third-party transaction, it not only minimizes the transaction fee but also increases the processing speed. While PUNO Blockchain can effectively create a decentralized ledger of all transactions across a peer-to-peer network, the personal information of a user can be kept hidden with a private key.

TOKENOMICS

PUNO tokens are based on TRON and can be purchased after creating an account and completing the KYC process. These tokens can be used for whatever purpose token issuers can desire. In the future, the token's value is estimated to rise by multiple times.

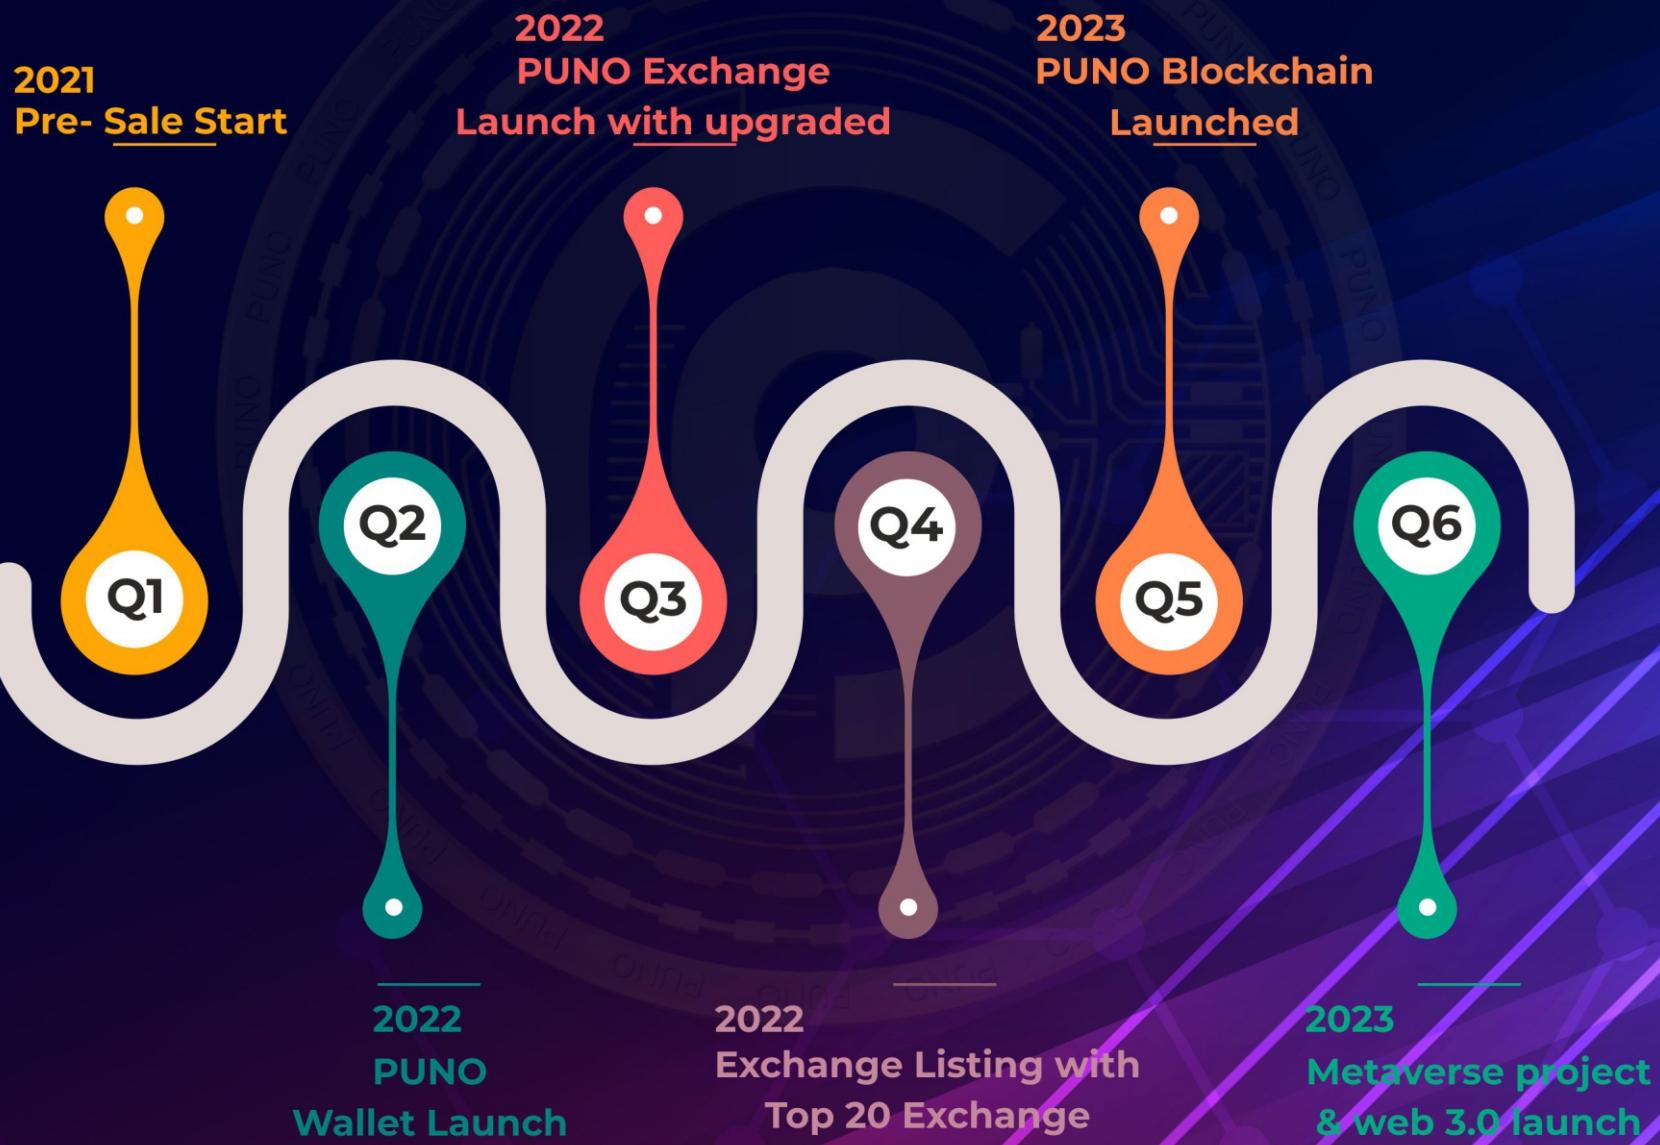

MILESTONES

PUNO COIN System aims to establish itself as one of the most widely used cryptocurrencies that can be used for payment, investment, and transmitting value across a decentralized network of users. In the future, our open-source crypto trading platform will be providing a decentralized suite of financial products like loans and insurance for individuals and businesses. Since its inception in 2020, PUNO is focused on achieving its objectives within three years. After this, it desires to grow the business and client base by taking innovative steps for value creation, raising capital, and mainstreaming institutional adoption. Read further to explore its approach:

ROADMAP

PRE-SALE

With PUNO Coin presale, we allow businesses and individuals to buy cryptocurrencies at a lower price. Another benefit of buying new cryptocurrencies at the presale stage is that the investor or buyer can secure a stake in that currency's total supply. Therefore, once their demand increases, the price will automatically increase.

To buy PUNO crypto coins, the buyer needs to follow the KYC process and must participate in the initial coin offerings (ICOs). The total Circulating Supply of 21000 PUNO coins has been sold in the following three steps.

Pre-sale scale-up of funds:

The process of raising funds by generating and selling crypto coins involves building a smart contract on the blockchain, bringing attractive schemes for them, and then selling the coins. Selling cryptocurrency-generated tokens usually involve lawyers, qualified investors, and a final public sale.

FUTURISTIC PROGRAMS

Here are some futuristic programs that we will launch sooner

► PUNO Wallet

Our crypto wallet uses blockchain technology to provide a safe avenue for storing and using crypto coins. They comprise private keys that allow customers to send, receive, and exchange cryptocurrencies securely. In the future, this wallet will allow instant transactions with numerous crypto coins. Moreover, it will be used for day-to-day payments and bill settlements across geographies.

► PUNO Trading Platform

We are on the verge of developing a highly efficient crypto trading platform where customers can exchange their crypto coins with other coins. This highly secure trading environment will be supporting around one hundred cryptocurrencies.

► Empower UPI Framework for PUNO Coin

PUNO is working on creating a UPI framework that will support web-based shopping, payments, and day-to-day transactions. It will be similar to the digital wallets that are used these days, but instead of cash-based transactions, it will be supporting crypto coin-based transactions and exchanges.

► Investment in real estate project with fixed staking

We are focusing on setting up a solid organization where cryptocurrencies can be purchased or sold in exchange for real estate properties, funds, and projects.

» Online Sources like E-commerce sites and dispatch NFT

In near future, we are looking to tie up with large e-commerce websites, where PUNO coins can be used as a payment option with the least exchange expenses. Moreover, we are also looking to dispatch non-fungible tokens to raise the number of transactions.

» Adoption of Web 3.0

Web 3.0 is the next-gen technology that focuses on intelligent information accessibility and for this, it has replaced centralized data servers with multiple computing devices. With a mission to propel growth and define new revenue streams, PUNO will be transitioning the entire organization to Web 3.0. This fundamental reinvention of its online business models will enable users to interact and collaborate without worrying about data loss or hacking.

» Launch of OTT stage for the amusement

With fully-featured OTT platforms, we are looking forward to launching multi-screen video/audio streaming services with unique features, and instantly deployable native mobile & TV apps.

» Transformation with Metaverse

PUNO aims to become the partner of choice for numerous industries when it comes to driving transformation through Metaverse innovation. Adaptation of a virtual reality platform can empower the users to create, build and monetize their virtual experiences. This will bring a paradigm shift to gaming platforms, social media channels, and websites, where customers can experience numerous real-life moments and characters in a virtual world. With an efficient team of Metaverse developers, we can help organizations to scale their digital business by making this evolution more inclusive.

Thank
you
